ASHOL

Our Mission

Nowadays many fraud traders are doing business using the name of popular brands of Bangladesh and the food quality in those fake outlets is very low and unhealthy. As a result, customers are constantly being cheated. We want to end this cycle of deception faced by the consumers.

Our Goals

Our Goal is to identify the original outlets of a brand and provide its list to the users.

RDMS Database for advanced users to query informations.
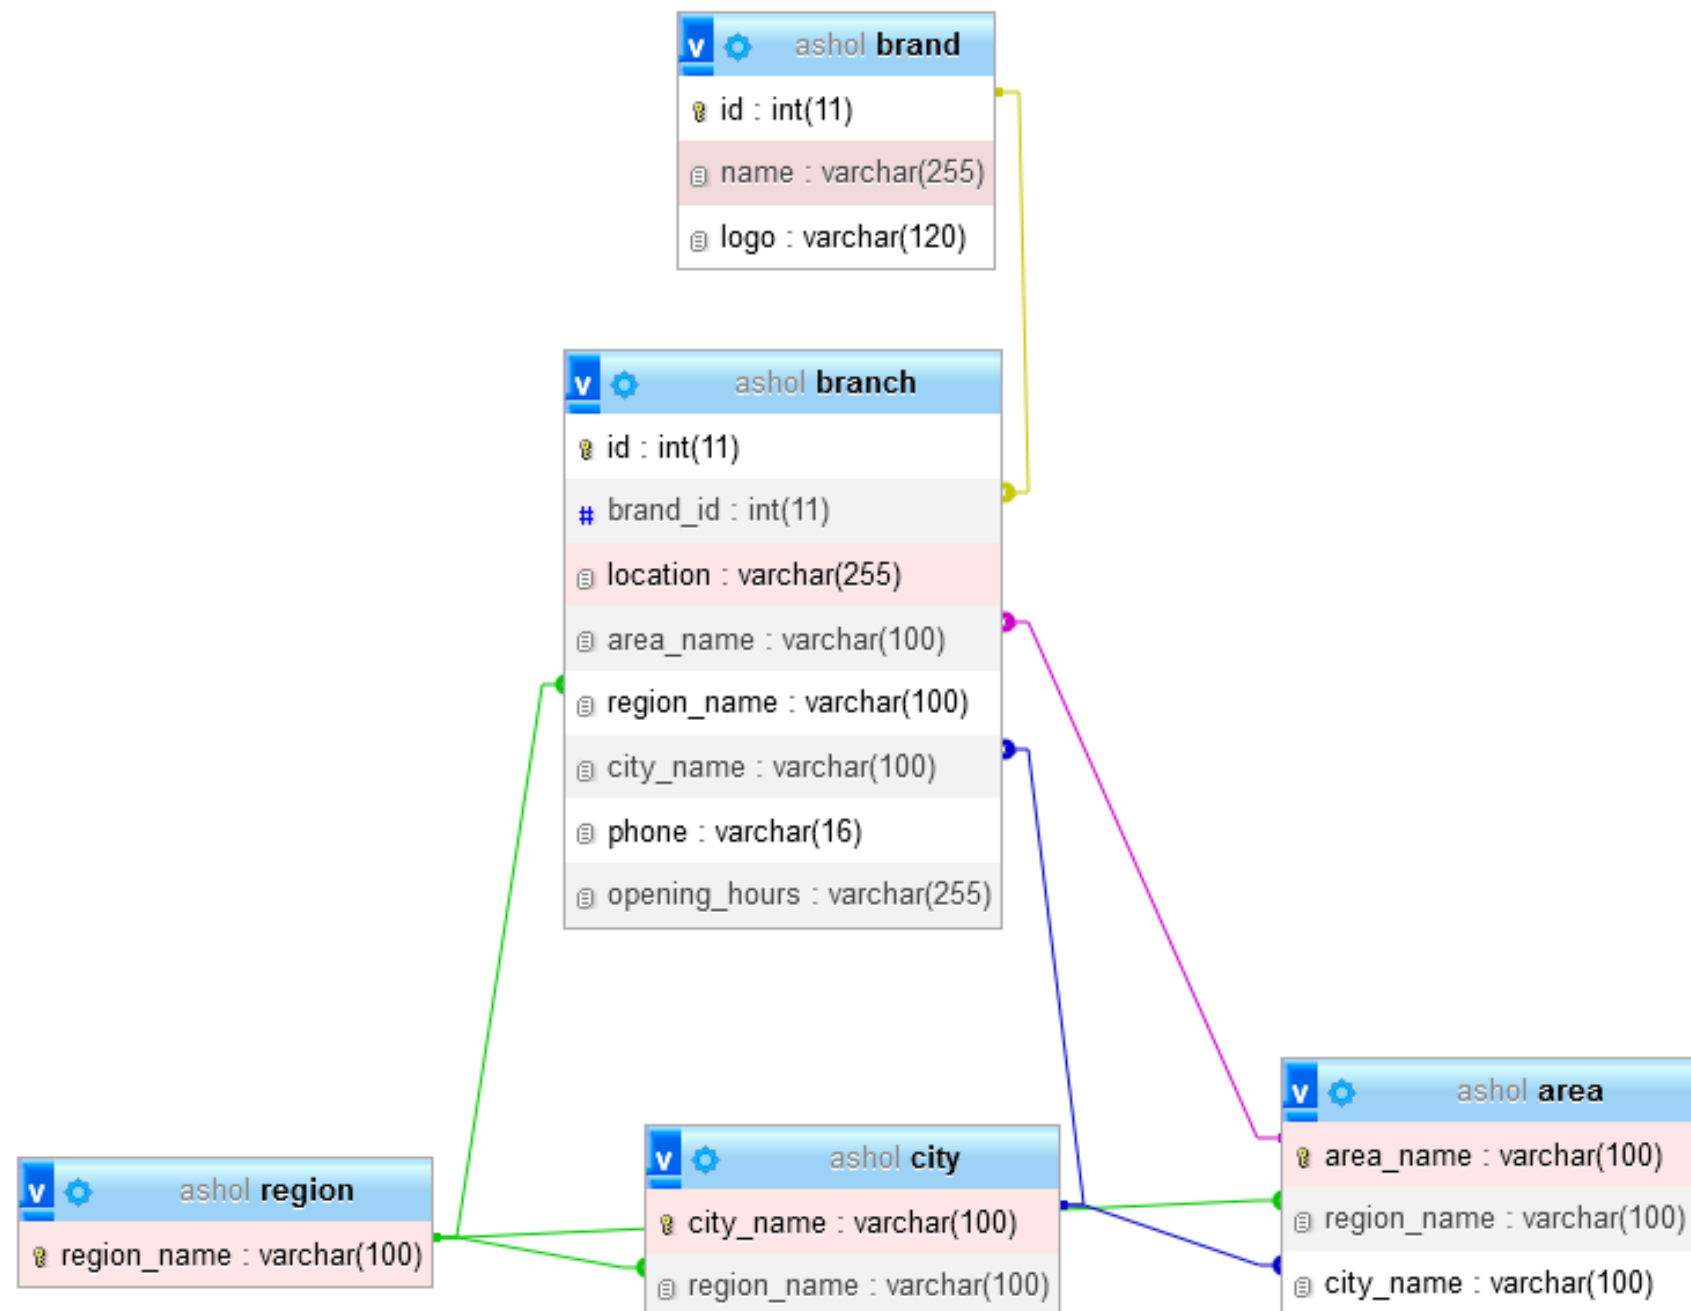

SOLUTIONS
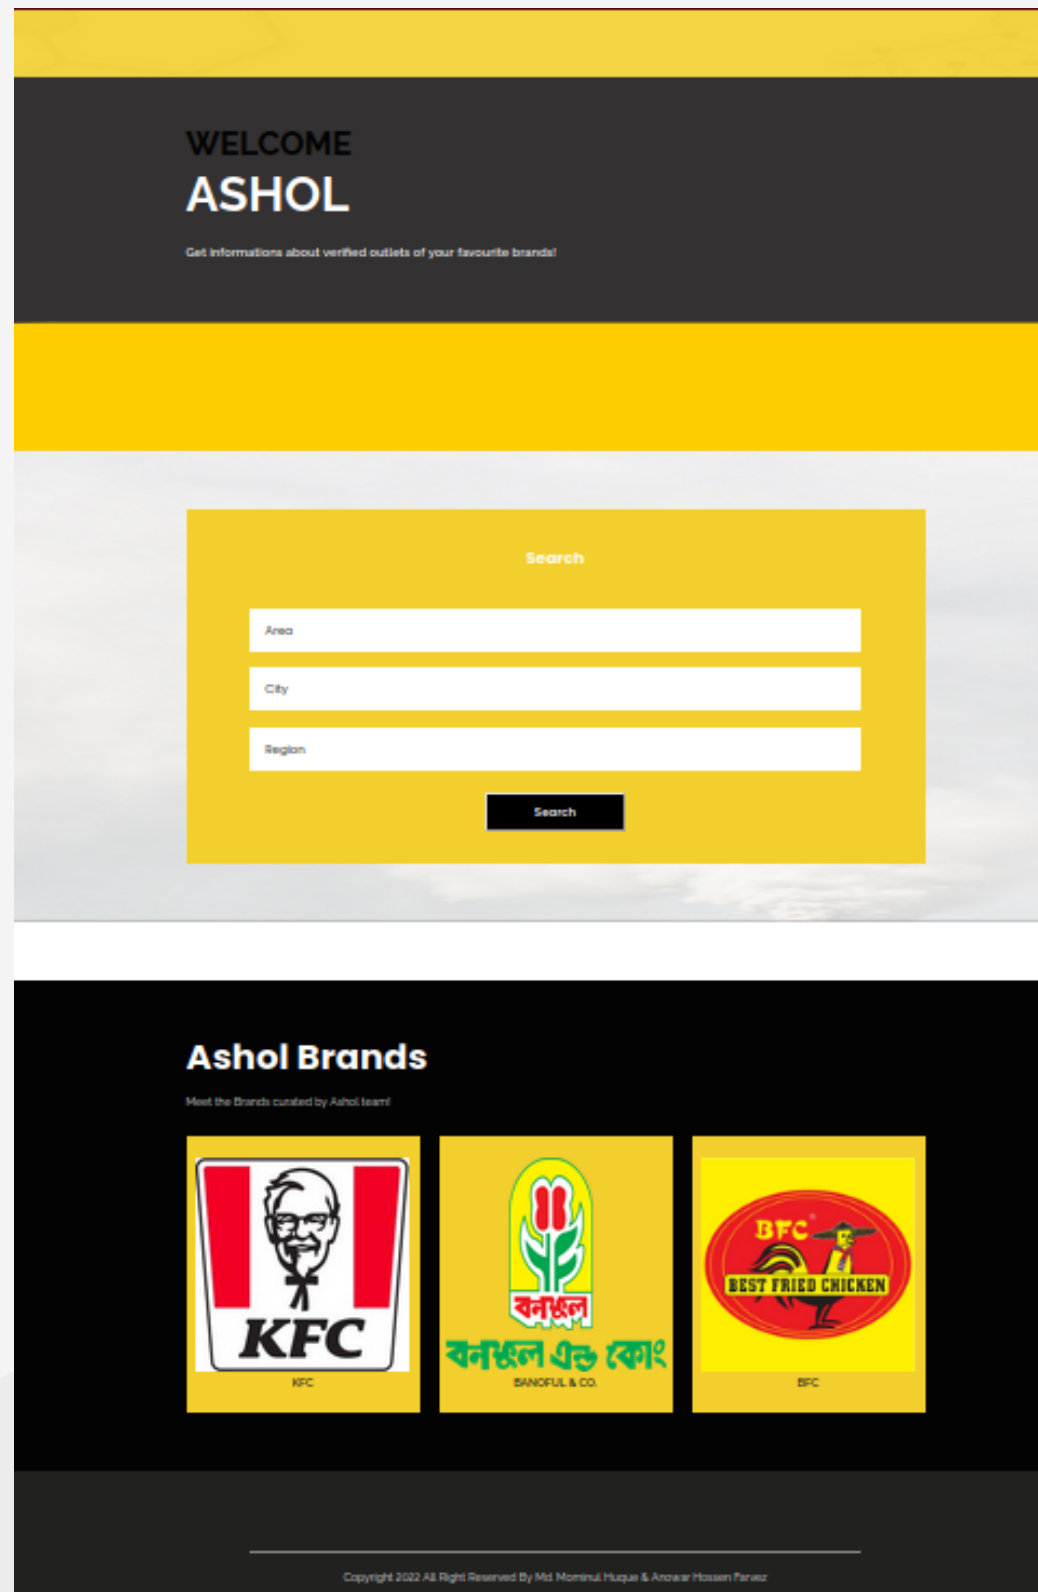

A web frontend for novice users

ASHOL

Database Schematic Diagram

The **brand** table have the entries for brands and **the branch** table have the data for all verified branches of all brands (the branches and brands have a foreign key relationship)

The location indicating branches (**area**, **city**, **region**) are for constraining the values which are to be accepted in the location fields (**area_name**, **city_name**, **region_name**), so locations are validated checked automatically by the database itself.

ASHOL

Web Interface for novice users

Underthehood we run SQL queries to present desired data to the users.

Features currently implemented:

- Search by Brand
- Search by Location (Area, City, Region) with auto-completation.

ASHOL

Search by Brand feature

This provides the list of available branches of a specific branch.
